International Space Games

October 26 – November 1, 2026
Skolkovo Innovation Center, Moscow

About

- ♦ An international educational engineering competition where student teams simulate a real space mission through a five-day isolation experiment in advanced habitat domes.

Supported by

- ♦ Government of the Russian Federation
- ♦ Presidential Administration of the Russian Federation
- ♦ Ministry of Education and Science of the Russian Federation
- ♦ Roscosmos
- ♦ Project Operator: HSE University (Higher School of Economics)

Competition Tracks

- | | |
|------------------------|-------------------------|
| ♦ Energy | ♦ Biology & Chemistry |
| ♦ Robotics | ♦ Psychology & Medicine |
| ♦ Space data analysis | ♦ Communication |
| ♦ Life Support Systems | ♦ Media |

ISG Habitat Complex

- ♦ 2 high-tech habitat domes
- ♦ 8 national teams from BRICS, SCO and CIS countries
- ♦ 2 national teams per dome, with 10 participants living in a shared environment
- ♦ Reality-show format with live online broadcasting
- ♦ 5 days of mission challenges and survival in a simulated Martian environment

ISG contributes to:

- ♦ Expanding international scientific and technological cooperation through the exchange of expertise and the implementation of joint engineering and research projects.
- ♦ Developing an international talent pool for national space programs and preparing world-class specialists.
- ♦ Creating an integrated space workforce development ecosystem for BRICS, SCO and CIS countries based on technological partnership, mutual trust, sovereign development, and long-term cooperation.
- ♦ Advancing international project-based engineering education by drawing on the experience of the Russian human spaceflight program

Space Games**

Take the challenge. Make history.

Composition of the ISG national team

Students aged 18 to 27 years

On-site Participants

Dome Crew Team

5 students

- ✦ resides on the station for 5 days in order to provide the autonomous space settlement with the essential life support, power and communications systems;
- ✦ conducts scientific experiments to analyze the potential for adaptation and development of living organisms and plants in harsh conditions for self-sufficiency of the autonomous settlement.

Roles:

- ✦ Flight Engineer
- ✦ Communications Systems Specialist
- ✦ Control Systems Specialist
- ✦ Researcher
- ✦ Media Specialist

MCC specialists

2 students

- ✦ ensure communication between stations and local remote laboratories;
- ✦ set objectives and plan the station's research activities.

Roles:

- ✦ Shift Supervisor
- ✦ MCC Operator

Experts

2-4 persons

- ✦ Team support expert (1-2 persons)
- ✦ Member of the professional jury (1-2 persons)

Remote Participants

Local Remote Laboratory

8-20 students

- ✦ provides remote scientific and technical support to their national team while conducting their own research projects submitted through the Model Experiments Competition.
- ✦ mirrors roles of the Dome Crew Team.

Competition of model experiments

1-3 studies

- ✦ The local remote laboratory participates in a separate competition for model experiments.
- ✦ As part of the competition, the laboratory submits 1 to 3 scientific studies or tests of technical solutions to be completed during the main mission period.
